

Canline Magnetic Components

Magnetic Components

Lift Hold and Separate Ltd are agents for Canline, together we are specialised in manufacturing magnet aided conveying systems as turnkey projects, individual magnetic conveying devices and magnetic components to be built into the customer's own constructions.

Standard Magnetic Units:

In "build it yourself" form are available in a variety of strengths and designs which, if chosen correctly will solve most magnetic conveying problems.

Besides a wide range of standard magnetic units, we can produce special magnets in various strengths tailored to suit individual requirements and production needs.

Magnetic Sheet Separators:

Sheet separators were specially developed to permit easy and uninterrupted removal of steel sheets stacked horizontally or vertically. No more prying apart of greasy oily sheets.

Magnetic Rollers Ø220 / Ø400 / Ø600:

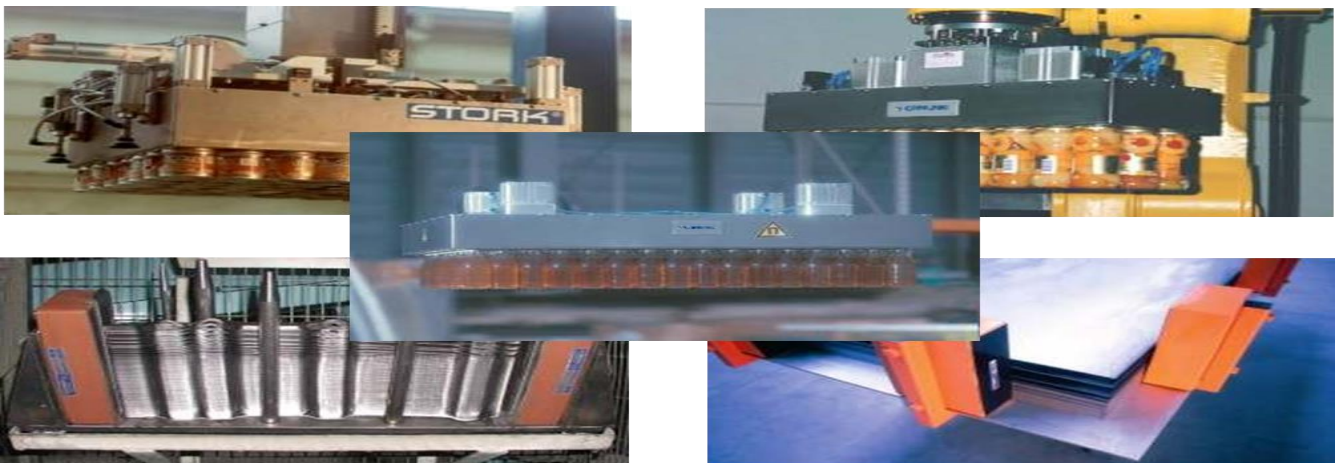

We can produce several types of magnetic rollers for can conveying systems. The range covers most of the requirements for modern can handling. For special applications we can produce tailor made rollers to your requirements.

For Robotics and Pick and Place units:

Light weight construction, suitable for:

- Glass jars
- Tin cans
- Many other applications
- Available in several sizes
- Individual switchable sections

Permanent magnets to handle steel products in a wide range of applications.

We firmly believe that product support is as important as product quality.
